1. Game Overview

Ki'on Dual is a local two-player competitive game for one laptop. Sylveon (light) and Umbreon (shadow) race across a symmetric parkour course, grab points, fight for a glowing flag in the middle of the arena, and then hit the **TWIST**: a dice roll swaps which player controls which Pokémon, *flag included*. The player who just captured the flag has to watch their opponent run it home, while they must switch from attacker to hunter.

Elevator pitch: *"Capture the flag, then lose it to your rival's hands. Win it back with your claws."*

1.1 Design Pillars

- **Risk vs. reward everywhere:** every route, item and attack is a bet on safety versus points.
- **The Twist changes who you are:** control swaps mid-match, so you must always think about both sides.
- **Readable chaos:** comic-panel visuals, big sound-effect words and clear light cues make fast fights easy to follow.
- **Short rounds:** one round is about 2 to 3 minutes. Easy to learn at a shared laptop, hard to master.

1.2 Theme Fit

Theme	How Ki'on Dual uses it
Comic	Comic-book art style: inked outlines, halftone shading, panel-based transitions and cut-ins, speech bubbles and onomatopoeia (POW, ZAP, WHOOSH) on every hit, a "TWIST!" splash panel.
Light	Sylveon's glow reveals and lights the stage; Umbreon hides and speeds up in shadow zones. The flag is a light orb that lights up its carrier. Lanterns on the stage can be toggled to change which routes are lit.
Twist	The central mechanic: after the flag capture a dice roll swaps player control of the two Pokémon. Points stay with the player, characters change hands.

2. Core Gameplay

Both players start at opposite bases (Player 1 on the left, Player 2 on the right) and move toward the middle. A round has five phases:

Timer in phase 4 prevents stalling (overtime rule).

2.1 Phase Breakdown

Phase	What happens	Key rules
1. Parkour	Both players cross a platform course toward the centre. Two routes exist: a safe route with few items and a risky route with many items placed on ledges where the opponent can easily attack.	Items give points. Risky-route items are worth about 3x more. Collecting items also fills the energy meter.
2. Flag Clash	Both reach the central arena. The flag orb is captured by standing on it and holding the button; a light ring fills. Being hit pauses the capture.	First to finish the capture earns the capture bonus . Fighting around the orb is expected.
3. TWIST	Comic splash panel, dice roll. Control is swapped: each player now controls the other's Pokémon. The flag stays on its Pokémon.	Scores belong to the player , not the Pokémon. The capturer keeps the capture bonus but no longer controls the flag carrier.
4. Return Rush	The flag carrier runs back to <i>their own</i> base. The other player tries to stop them using attacks, traps and light/shadow tricks.	HP, energy-cost attacks (card-game style). On death a Pokémon respawns at its base and rejoins the hunt or defence.
5. Round End	The round ends when the flag reaches a base. Scores are totalled and the higher score wins the round.	Delivery bonus for safe return. Kill bonus for stopping the carrier.

2.2 Why the Twist Works

- It makes the capture a *strategic* choice: the capture bonus is big, but you hand the flag to your rival's control.
- It breaks "I mastered one character" habits: both players need to know both Pokémon.
- It resets the tension just when the fight in the arena peaks, creating a natural second act.

3. Level Design

A single symmetric 2D side-view stage keeps the jam scope manageable and the game fair. Both halves are mirror images, so neither player has a layout advantage.

3.1 Level Elements

Element	Purpose
Safe route (upper path)	Covered platforms, fewer pickups, small point values. Good for players who are behind on HP.
Risky route (lower path)	Open ledges, many pickups, high point values. Items sit where the opponent in the arena can shoot or ambush.
Bases	Spawn, respawn point and delivery goal. Brief spawn protection to prevent spawn-kill.
Flag arena	Central raised platform with the flag orb. Light pillars and shadow pockets support both characters' abilities.
Lanterns (Light mechanic)	Hit-to-toggle lights. Lit zones expose Umbreon; dark zones boost Umbreon and hide the lane from Sylveon's long-range reveal.
Hazards (stretch)	Falling platform tiles and bounce pads for parkour flavour.

4. Characters and Combat

Combat is inspired by the Pokémon card game: every character has an HP total and moves with an **energy cost**. Energy pips regenerate slowly and are refilled by pickups, so item greed also feeds your fighting power.

	Sylveon (Light)	Umbreon (Shadow)
Role	Ranged, zoning, support	Melee, ambush, speed
HP	100	110
Move speed / jump	Normal / floaty double jump	Fast / sharp single jump + wall cling
Basic (0 energy)	Swift Star : small homing projectile, 8 dmg	Bite : short melee, 12 dmg
Skill (1 energy)	Moonblast : arcing blast, 25 dmg	Shadow Ball : straight ball, 22 dmg
Signature (2 energy)	Draining Kiss : 25 dmg, heals self 15	Mean Look : roots target 1.5s, 10 dmg
Light ability	Glow : reveals shadow-hidden enemies in radius, lights lanterns	Shade : in dark zones, +speed and not shown on the glow-reveal

Some values are subject to change.
